

Batphone- Cardiac Arrest

Is it within Mon-Fri 8am-5pm **and** Does it fit all eCPR Criteria:

- The cardiac arrest is likely to be of primary cardiac or respiratory cause
- The cardiac arrest was witnessed by a bystander or paramedic
- Chest compressions were commenced within 10 minutes
- The cardiac arrest duration (collapse to arrival at ED) has been < 60 minutes
- The patient is aged between 16-70 years
- There are no major co-morbidities that would preclude return to independent living
- If non cardiac, the cause is likely reversible (eg hypothermia, overdose)

Yes

Call 555 and state E-CPR
activation

Assemble arrest team

Commence normal ALS prior
to arrival ICU and cannulation

No

Continue as per normal
ALS protocol
